NOVAGEO

GROUNDED IN EXCELLENCE

NovaBag NB

NovaBag NB is a highly customized, flexible geotextile bag fabricated from durable and permeable woven geotextile fabric, engineered to provide effective erosion protection across a wide range of inland waterway infrastructures. When filled with sand, NovaBag NB forms a stable mass-gravity structure that can be placed along riverbank slopes for long-term erosion control.

Constructed with high-performance fabrics and reinforced seam integrity, NovaBag NB ensures durability and reliability under sustained hydraulic conditions. It can be fabricated in various sizes and shapes to accommodate specific project and site-handling requirements, offering adaptability across diverse applications.

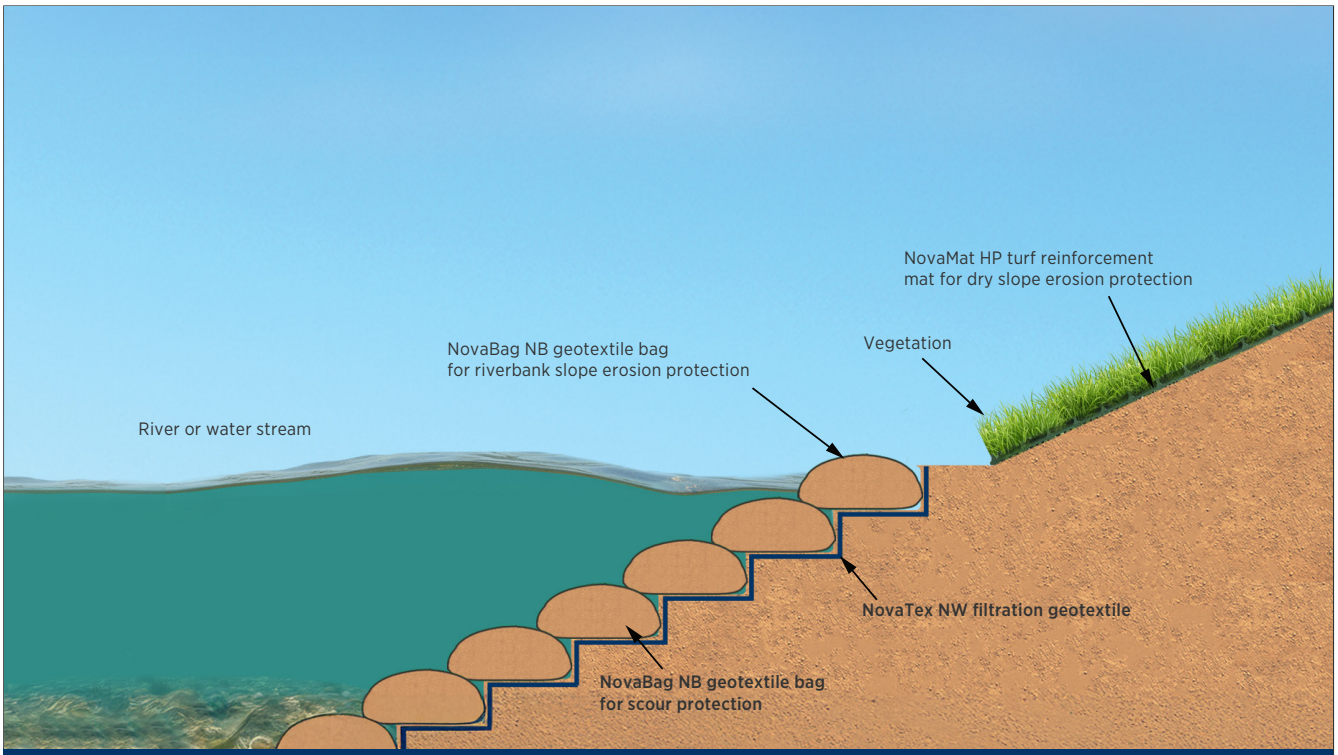
NOVAGEO

GROUNDED IN EXCELLENCE



Erosion protection for inland waterway infrastructures

Features:

- **Engineered for durability and long-term performance**

  Fabricated with high tenacity polypropylene (PP) woven geotextiles, NovaBag NB ensures long-term performance and structural stability of inland waterway infrastructures.

- **Versatile and customizable to meet specific project conditions**

  Available in various sizes and shapes to accommodate specific project requirement and site-handling requirements.

Typical Application :

- Riverbank
- Levee
- Dike
- Water canal

Functions :

- Separation
- Filtration
- Surface Erosion Control
- Reinforcement

Office location: SO-18-1, Menara 1, Strata Office,
No.3, Jalan Bangsar, Eco City, 59200 Kuala Lumpur.
